Sirs:In regard to House Bill HR4026 and the concern of the NAB to XM radio broadcast of weather and traffic info. As a professional trucker drive this service is vital information which can save myself and 100,000's of other drivers like me time and money. Where local radio may give this information, we need to have it well in advance of there coverage area in order to take appropriate measures. By the trucking industry being able to avoid severe weather and major traffic problems it leads to enhanced safety for all the motoring public. This is an issue that many fail to take into consideration on this matter.  
Thank you for your time,  
David Capps
